

# ALGEBRA ANTICS #3

Find the value for each expression. Put your answer in the blank in the ordered pair. Take the ordered pair for problem #1 and plot the point on the graph. The first number of the pair tells how far to move horizontally on the x-axis; the second number tells how far to move vertically on the y-axis. Next, plot the point for #2. Draw a line to connect the two points. Continue plotting each new point and connecting it to the preceding point until you reach the end.

- |                 |                     |                      |                     |                      |                    |
|-----------------|---------------------|----------------------|---------------------|----------------------|--------------------|
| 1. $-9 + 8 =$   | ( <u>    </u> , 3)  | 8. $-3 + -4 =$       | (-1, <u>    </u> )  | 15. $23 + -18 =$     | ( <u>    </u> , 3) |
