# **Probability Take Home and Check**

Problems are leveled: A = basic B = moderate C= challenging

1) What is the sample space when 2 coins are (A) tossed?

2) At Kennedy Middle School, 3 out of 5 students make the honor roll. What is the probability that a student does not make the honor roll? Give your answer as a fraction, decimal and percent.

3) A large basket of fruit contains 3 oranges, 2 apples and 5 bananas. If a piece of fruit is chosen at random, what is the probability of getting an orange or a banana? Give your answer as a fraction, decimal and percent.

① 1<sup>St</sup> event ② 2<sup>rd</sup> event Coin 1 Coin 2 T, H T, H

Sample space

Remember that Sample space lists all the poss. outcomes.

② Since 3 make the honor roll 3 do not make it.

$$\frac{2}{5} = .4 = 40\%$$

 $\frac{3}{10} = \frac{4}{5} = .8 = 80\%$ 

You do not multiply them together because it is not 2 diff events.

(H)

$$\frac{1}{36} = .0278 = 2.78\%$$

4) A pair of dice is rolled. What is the probability of getting a sum of 2? Give your answer as a

fraction, decimal and percent.

- 5) A card from above is drawn at random. Write the probabilities as fractions and percents.
  - a) P(1)
  - b) P(6)
  - c) P (shaded)
  - d) P (not shaded)
  - e) P(<8)
  - f) P (odd)
  - g) P (divisible by 2)

## Then make a line of probability and put a-b on the line.

- (5) a)  $\frac{1}{5} = .2 = 20\%$ 

  - b) 0 c) 2= .4= 40% d) 2= .6= 60% e) 3= .6= 60% e) 6= 100% f) 6= .6= 60% f) 6= .6= 40% g) 6= .4= 40% g) 6= .4= 40%
- g df 0%

- 5) Which best describes a sample space?
  - a) An event
  - b) A number of unsuccessful outcomes
  - c) A set of all possible outcomes of an event
  - d) A set of successful outcomes

6

7) When traveling from Midland to Houston, a tourist plans to make stops at Austin and San Antonio. There are 2 scenic routes from Midland to Austin. There are 4 scenic routes from Austin to San Antonio, and 2 scenic routes from San Antonio to Houston. How many different scenic routes can the tourist take? Show the work!

8) A coin purse contains 3 pennies, a nickel, 3 dimes and 2 quarters. If the first coin is not replaced before the second coin is drawn, what is the probability that the first coin is a dime and the second coin is a quarter?

(8) 
$$\frac{3}{9} \cdot \frac{2}{8}$$

reduce =  $\frac{3}{9} \cdot \frac{21}{84} = \frac{1}{12} = .0833$ 

[8.33%]

- 9) Mr. Potato Head makes chairs. He uses leather, corduroy, vinyl or plastic for the upholstery. The frames are made of oak, maple or ash.
  - a) How many choices does a customer have?
  - b) What is the probability that a choice is oak with leather upholstery?

9

a) 
$$4 \times 3 = 12$$

b) 
$$\frac{1}{3} \cdot \frac{1}{4} = \boxed{\frac{1}{12}}$$

10) A witness observed the license plate of a speeding car leaving the scene of an accident. One of the three digits and two of the three letters on the license plate were covered with mud. You know that the three digits are followed by three letters on all license plates. What is the greatest number of license plates that you would have to check to find the owner of the car?

4 9 ° K
10 . 26 . 26 =
6760 plates

- 11)Which word should go in the blank: Sometimes, always or never?
  - a) The probability of an event that may occur is \_\_\_\_\_expressed as a whole number.
  - b) The experimental probability of an event is the same as the theoretical or mathematical probability of an event.
  - c) In an experiment, all possible outcomes are equally likely.

- a) never
- b) sometimes
- c) Sometimes

12) A school found that 9 out of 10 students like pizza. If three students are chosen at random with replacement, what is the probability that all three students like pizza?

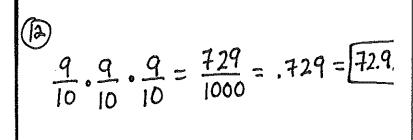

13)A multiple choice test has 3 questions. Each question is answered with an a, b, c or d. How many outcomes are possible?

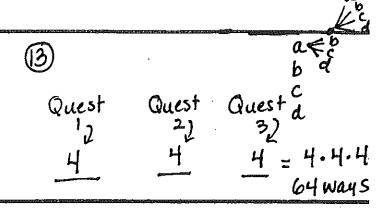

14) If a school offers 9 different subjects, how many different schedules of 5 classes are possible? A student can have one subject only once.

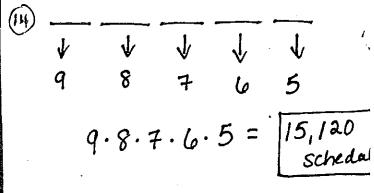

15)Draw a tree diagram and tell how many possible outcomes?

Smith or Patel for President

Jones, Chin, or Rosen for Vice President

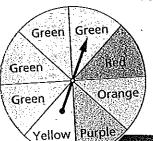

16)Decide whether the possible resulting events are equally likely. Write yes or no.

- a) You roll a number cube. You roll an even number, or you roll an odd number.
- b) A baby is born. The baby is left-handed, or the baby is right-handed.
- c) You toss a marshmallow. The marshmallow lands on its end, or the marshmallow lands on its side.
- d) You draw a card from a standard deck of 52 playing cards with no jokers. The card is a heart, the card is a club, the card is a diamond, or the card is a spade.
- e) You toss a coin three times. You get three heads, you get two heads and a tail, you get a head and two tails, or you get three tails.

17) The spinner below is used in a board game. The table below shows the actual number of times the spinner landed on different colors after being spun 40 times.

Spinner Results			
Color	<b>Number of Spins</b>		
Purple	4		
Red	7		
Green	. 20		
Yellow	6		
Orange	3		

Which color has the same theoretical and experimental probability of the arrow landing on it?' Explain your answer.

17

The sample space of the experiment: 4+7+20+6+3 = 40 spins

Experimental	Theoretica
purple 40	18
$red \frac{7}{40}$	7
green 20 40	2
yellow to	<u> </u>
orange 3 40	8

18) Find the probability of each scenario below if you pick one coin from the purse and then another without replacing the first.

a) P (quarter, then dime)

- b) P (dime, then penny)
- c) P (penny, then penny)
- d) P (quarter, then dime, then penny)

$$P = 4$$
 $N = 4 = 20$ 
Totals =  $D = 10 = 20$ 

a) 
$$\frac{2}{20} \cdot \frac{10}{19} = \frac{1}{19}$$

b) 
$$\frac{10}{20} \cdot \frac{41}{19} = \frac{10}{95} \cdot \frac{2}{19}$$

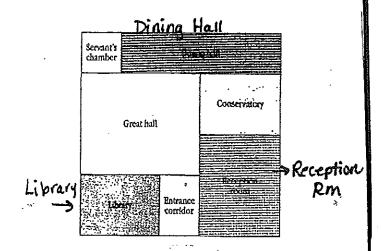

c) 
$$\frac{14}{20} \cdot \frac{3}{19} = \frac{3}{95}$$

$$d)'\frac{2}{20} \cdot \frac{10}{19} \cdot \frac{41}{18} = \frac{2}{171}$$

- (19)
  - 19) When you play the 1<sup>st</sup> level of the Treasure

    Hunt Game, the computer hides a treasure
    on the 1<sup>st</sup> floor of the palace. The floor plan
    is pictured below. The computer gives the
    player clues about where the treasure is
    located. After each clue, the player must
    guess which room the treasure is in. The
    computer continues to give clues until the
    player finds the treasure. The first time
    you play Level 1, the treasure is hidden in
    the library.

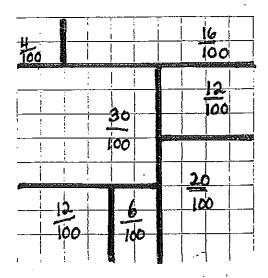

Level 1

- a) On the computer screen, the 1<sup>st</sup> floor of the palace is 10 inches by 10 inches. Use this information to divide up the 1<sup>st</sup> floor.
- b) What is the probability that the treasure Will be hidden in the library the second time you play Level 1?
- c) Bob says, "because the computer randomly picks the location of the treasure, it is just as likely to be hidden in the entrance corridor as in the great hall." Is Bob correct?
- d) NEW GAME: (Note: Treasure cannot land in the same area during the same game.)

What is the probability that the treasure will land in the servant's chamber and then in the conservatory?

19) Use a grid. It helps to a) see the sections.

$$\frac{12}{100} = .12 = 12\%$$

c) No, because the probability of the treasure being in the entrance would be 6% whereas the great hall would be 30%.

$$\frac{d}{100} \cdot \frac{12^{31}}{96} = \frac{1}{200} = .005 = \frac{1}{.5\%}$$

20) Julie develops a new carnival game for the fair at Dale Street School. A bucket contains four blue marbles and one orange marble. Without looking, a player draws one marble from the bucket, replaces it, and then draws a second marble. If the marble is orange on both draws, the player wins.

The Carnival Committee has decided to charge players four 50 cent tickets to play the game. Prizes awarded to the winners will cost the school \$5 each.

a) If 100 people play Julie's game, how much money will the school collect? How much money can they expect to pay out in prizes?

b) If 5 people play Julie's game, what are the odds of them ALL winning?

#### 21) Dependent or Independent? (D or I?)

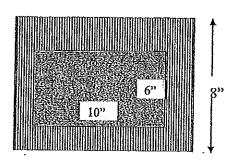

- )a) I choose a stick from the cup for a refresh question. I do not put it back in and then choose someone to answer the next question.
  - b) You choose a member of a baseball team to be the pitcher. You then choose a different member of the team to be the catcher.
  - c) You roll an odd number on a number cube. You then roll the number cube again and roll an even number.
  - d) A teacher is randomly assigning you, your friend, and 4 other students to 6 different seats. You are assigned the first seat. Your friend is assigned the second seat.

(20) a) Bucket = 
$$0 = 1$$

b) 
$$\frac{1}{5} \cdot \frac{1}{5} \cdot \frac{1}{5} \cdot \frac{1}{5} \cdot \frac{1}{5} = \frac{15}{55} = \frac{1}{3,125}$$

- (21)
  - a) [
  - b) D
  - c) I
  - d)D

22) You win \$10 in the Toss-A-Penny game at an amusement park if you toss a penny which lands in the shaded area below. You win \$20 if you toss a penny which lands in the striped area.

- a) Find P (landing in a shaded area)
- b) Find P (landing in a striped area)
- c) If you toss 200 pennies one after the other, in which area do you think more pennies will land? Give a reason for your answer.
- (23) A coin is tossed and a 6 sided die is rolled.
  - a) Find the probability of getting a head on the coin and a 6 on the die.
  - b) Explain the theoretical and experimental probability using this example.

a) 
$$\frac{60}{96} = \frac{5}{8} = .625 = 62.5\%$$

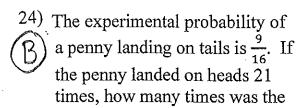

b) 
$$\frac{36}{96} = \frac{3}{8} = .375 = 37.5\%$$

c) Shaded, because it covers more area.

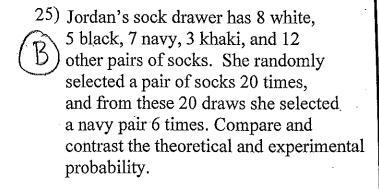

(23)  
a) 
$$\frac{1}{2} \cdot \frac{1}{6} = \frac{1}{12}$$

b) The theoretical is 12.

The experimental would be actually performing this experiment & recording the results.

coin tossed?

26) Find the probability that a randomly thrown dart will land in a shaded region of the figure below.

24) Tails = 
$$\frac{9}{16}$$
 Heads =  $\frac{7}{16}$ 

$$\frac{7}{16} = \frac{21}{x}$$

$$\frac{7 \times 3}{16 \times 3} = \frac{21}{48}$$
[ $x = 48$  fines

35) Sample Space:

$$8+5+7+3+12=35$$

Theoretical:  $\frac{7}{35}=\frac{1}{5}=20\%$ 

Experimental:  $\frac{1}{20}=\frac{3}{10}=30\%$ 

The experimental gave a higher probability of selecting vavy socks.

26) Sample Space = 20 blocks

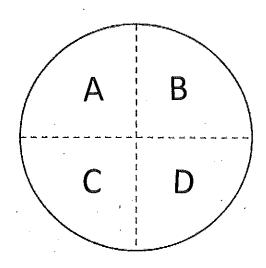

> Shaded blocks = 8 (favorable outcome)

unshaded blocks = 12 (unfavorable outcome)

$$\frac{8}{20} = \frac{4}{10} = 40\%$$
 chance of a favorable 1 outcome.

Design an experiment to simulate
30 spins of a spinner that has
equal sections labeled A, B, C,

and D.

- b) Find the experimental probability of each letter.
- c) Compare the experimental probabilities with the theoretical probabilities.

### Answers will vary.

a) I took 4 index cards and wrote ABCD on them. I shuffled them, turned them face down and drow from the cards 30 times with replacement

results.

В	Ç	A	B	D
C	A	B	B	C
ں	D	B	C	D
٥	ß	A	D	A
D	C	Ŋ	B	C
D	B	C	D	A

b) probability of 
$$A = \frac{5}{30}$$

$$B = \frac{8}{30}$$

$$C = \frac{8}{30}$$

$$D = \frac{9}{30}$$

C) Theory Experiment

$$A = \frac{1}{4} = 25\%$$
 $A = \frac{1}{30} = \frac{1}{6} = \frac{16.6\%}{30}$ 
 $A = \frac{1}{4} = 25\%$ 
 $A = \frac{1}{30} = \frac{10.6\%}{30}$ 
 $A = \frac{1}{4} = \frac{10.6\%}{30}$ 

- 28)
  - a) I will use a number cube to simulate 2 out of 6 students in the band. Rolling a one or a two equals students in the band (favorable outcome) Rolling a 3,4,5,6 will equal students not in the band (unfavorable outcome).
  - b) I rolled 2 dice (one for each of the 2 students) 20 times.
- 20 Trials

  2,5 5,2 2,4 5,5

  4,4 6,5 1,2 2,3

  3,5 4,1 1,6 6,2

  1,1 5,4 5,3 3,4

  4,1 6,2 1,2 6,5
- d) There are 3 favorable outcomes: 1,1 1,2 1,2
- e)  $\frac{3}{30} = 15\%$

- 28) At the Midland Middle School, about
  2 out of every 6 students are in the school band. Design a simulation and generate 20 trials to estimate the probability that the next 2 students to enter the lunchroom are in the school band.
  - a) How will you represent 2 out of every 6 students?

#### 20 Trials of 2 students

1			 
1	i		
1	ļ		
1			 
1	,		!
1			l

			1
		-	
1			I
			l
i		l	 <u> </u>

- b) How will you generate the data?
- c) Generate the data and record it in the table.
- d) Describe the favorable outcomes.
- e) Count the number of favorable outcomes in your data. What is the probability that the next 2 students who enter the lunchroom will be in the school band?

- 29) John's record shows that he makes

  \[ \frac{1}{3} \text{ of his shots in basketball. He} \]

  wants to know the probability that he will make at least 2 of his next 3 shots.
  - a) Describe a spinner that could be used in a simulation. What spin would represent making a shot?
  - b) For each trial, how many times will you spin the spinner? What will be a favorable outcome?
  - c) Show the sample space for the outcomes. Which of the outcomes represent favorable outcomes?

M = a missed basket B = a basket scored

29)

a)

- b) For each trial I will spin the spinner 3 times. M=miss B= a basket (unfavorable) (favorable)
- C) Organized List:

  BBB MMM BMB

  BBM MBB

  BMM MBB
